Product Owner with 4+ years in end-to-end product ownership, drawing on 13+ years in technology, delivery, and payments. Owns the B2B specifications and backlog behind Google Pay and Samsung Pay wallet provisioning for a major US card network, and delivered the retrieval flow for Google Chrome's Virtual Card autofill – $900K settled volume in the first 45 days, 275,000+ requests in the first 60. Combines deep payments domain expertise (tokenisation, wallet integrations, card lifecycle) with commercial sharpness built across pre-sales solution architecture experience. Outside of enterprise delivery, directs several AI models, including Claude Code, ChatGPT and Perplexity, to build open-source AI tooling, approving every merge.

Core Competencies

- **Product Ownership**: Backlog management, epic/story elaboration, acceptance criteria, MVP definition, release planning, requirements elicitation
- **Agile Delivery**: Scrum, SAFe, PI Planning, sprint planning & reviews, cross-functional dependency management, delivery governance
- **Payments Domain**: Digital payments, tokenisation (EMV / virtual cards), wallet integrations (Google Pay, Samsung Pay), issuer push provisioning, regulatory compliance (RBI, PCI)
- **Commercial & Pre-Sales**: Business case development, bid management (RFP/RFI), commercial modelling (TCV >$100M), Go-to-Market strategy
- **AI-Augmented Delivery**: Gemini (epic/story drafting, acceptance criteria refinement, stakeholder communication)
- **AI-Directed Delivery**: Multi-agent system architecture, AI-output governance, prompt architecture – directed several AI models (Claude Code, ChatGPT, Perplexity) on an open-source credit-underwriting framework, and Claude Code on a job-search automation fork (see Independent Projects)

Professional Experience

Cognizant Technology Solutions **Farnborough, UK**
Product Owner *2026-Present*

- Own product backlog for edge applications connecting card network to Google Pay and Samsung Pay – translating requirements into epics, user stories, and acceptance criteria for two agile squads
- Define and maintain B2B integration specifications for wallet provisioning adopted by partner organisations
- Lead wallet provisioning validation across Google Pay and Samsung Pay for a large-scale card migration programme
- Generalised B2B integration specifications to onboard international franchise issuers onto push provisioning, taking the first live in 2025
- Passed an enterprise audit on full B2B specification-change traceability, mapping every change from tracker entry to Jira epic

Cognizant Technology Solutions **Farnborough, UK**
Product Owner (Proxy) & Onsite Delivery Manager *2022-2026*

- Launched Virtual Card autofill feature to 100% of eligible cardholders (Nov 2024) – 275,000+ successful transactions in first 60 days, $900K settled volume in first 45 days
- Delivered Issuer Push Provisioning into Google Wallet, defining the network-side B2B specification adopted by issuer bank partners
- Traced a critical latency risk via Datadog to a downstream partner dependency and worked cross-team to cut risk-checked response times from 7-8s to 3.5-4s, meeting Google's strict 5-second SLA
- Enforced a rigorous Definition of Done across multi-environment CI/CD deployments; personally authored Google's partner certification test cases for the Retrieval flow
- Recognised with 'Star Award – Excellence in Delivery' (December 2024)

- **Cognizant Technology Solutions** — **Kolkata, India**
  Pre-Sales Solution Architect — *2019-2022*
  - Architected and won proposals totalling >$100M TCV across DevOps transformation, test automation, and quality engineering programmes
  - Co-authored Cognizant Cheers Award-winning whitepaper, "Digital Transformation – A Quality Engineering Perspective"
- **Cognizant Technology Solutions** — **Kolkata, India**
  Pre-Sales Lead / Senior Analyst — *2016-2019*
  - Bid management and solution development across the banking and financial services portfolio: RFP/RFI response, solution design, commercial modelling, pricing strategy
- **Cognizant Technology Solutions** — **Kolkata, India**
  Business Analyst & Test Lead — *08/2014 - 12/2015*
  - Led a team of 10 QA engineers validating the transaction authorisation module during a major card network upgrade, including testing of new tokenisation capabilities
- **Cognizant Technology Solutions** — **Pune, India**
  Presales Consultant — *05/2014 - 08/2014*
  - Joined in a pre-sales consulting capacity supporting the BFS Quality Engineering and Assurance practice, contributing to bid responses and solution development before transitioning into a client-facing delivery role
- **Tata Consultancy Services** — **Mumbai, India**
  Software Engineer (Java) — *2010-2012*
  - Engineered enhancements to dematerialisation, rematerialisation, and securities transfer modules for India's largest securities depository

Independent Projects

- **Open-source, synthetic data only**
  OpenCAM Framework — *2026 – Present*
  - Directed several AI models to build a multi-agent Maker-Checker credit-underwriting framework: Claude Code for most of the build and for merges (each on my explicit approval), ChatGPT and Perplexity for raising PRs, Perplexity also reviewing; a deterministic policy engine enforces the covenant rules; every PR carries an AI-assistance disclosure; not production-approved
  - A codebase audit caught a correctness bug (a debt-free company's DSCR silently evaluated as 0) before it reached a credit decision, proving the value of deterministic policy-gating over raw LLM output
- **Solo-built, forked & extended**
  AI Job Search Automation — *2026 – Present*
  - Forked an open-source job-search framework and directed Claude Code to build custom enhancements on top of it (Gmail sync, dedup logic, a live dashboard)

Education

- **SJMSOM, IIT Bombay** — **Mumbai, India**
  M.Mgmt. (MBA equivalent) in Business Administration & Management — *2012-2014*
  GPA: 8.38 / 10.0
- **West Bengal University of Technology** — **Kolkata, India**
  B.Tech. in Computer Science — *2006-2010*
  GPA: 8.47 / 10.0

Languages

- English (C2, native/working language), Bengali (native), Hindi (C1), German (A0, beginner).

Honors and Awards

- **Star Award – Excellence in Delivery** – Cognizant Technology Solutions (2024).
- **Cognizant Cheers Award** – for co-authored whitepaper on digital transformation.
